Finding common ground
and making real progress

Dear CoPIRG member,

Thank you for opening this report on our action, progress and results in 2020—a year that many Americans wish they could forget.

As the nation grappled with COVID-19, many of our national network’s advocates and organizers turned their focus to strategies designed to save as many lives as possible.

Our staff and many of our supporters joined public health and medical groups in urging federal leaders to centralize the medical supply chain to ensure critical supplies reached areas most in need. As cases surged in the summer and fall, we joined health care workers in calling on states and federal leaders to put public health first by scaling back reopening until the virus could be suppressed. And, with the announcement of promising vaccine trial results as the year came to a close, we organized online forums with expert panelists to identify strategies for vaccinating as many people as possible as quickly as possible.

Meanwhile, PIRG’s consumer watchdogs continued to monitor the marketplace and give consumers resources to protect themselves. After a report by U.S. PIRG Education Fund revealed rampant price surges for hand sanitizer and masks on Amazon in March 2020, for example, we started a call for the world’s largest online marketplace to adopt controls to protect Americans from price surges for essential items.

As COVID-19 cases climbed in the spring of 2020, it became vitally important for hospitals to keep ventilators in service as much as possible. Our Right to Repair campaign mobilized quickly to call on manufacturers to lower barriers to ventilator repair, and, in April, several major manufacturers did exactly that.

All of these efforts—in addition to our ongoing work to cut down on plastic waste, reduce our exposure to toxic chemicals, and more—were made possible by your support. Our country will always face challenges. As the American people decide how to meet them, it’s our job to offer a voice for the public interest. We’re grateful to you and so many others for granting us this privilege.

Thank you.

Danny Katz
Executive Director
CoPIRG Executive Director Danny Katz and Servicios de la Raza held a “Yes on 2A” panel to discuss the wide-ranging benefits of funding clean transportation and other climate solutions in Denver.

Transforming transportation

In 2020, Colorado made crucial progress toward cutting the health-harming and climate-changing pollution that comes from our car-centric transportation system.

Denver votes ‘Yes’ on funding for climate solutions

NOV. 12, 2020: Denver voters gave a $36 million boost to climate solutions in the Mile High City.

In the November general elections, voters passed Denver ballot measure 2A, which will create a fund to expand renewable energy and electric vehicle infrastructure, upgrade buildings to be more energy efficient, and support multimodal transportation options such as transit, walking and biking.

In the months leading up to the election, CoPIRG educated and mobilized voters to support the measure by working with the Denver Streets Partnership and Servicios de la Raza to reach thousands with “Vote Yes” text messages and phone calls, among other activities.

“Denver voters are stepping up and supporting a precedent-setting measure for smart climate solutions that will give our children and grandchildren a better chance of a safer and healthier future,” said Danny Katz, executive director of CoPIRG. “2A will provide badly needed dollars to invest in tried-and-tested strategies for reducing emissions and mitigating the worst effects of climate change.”

Colorado headed the right way on electric vehicles

JAN. 4, 2021: Colorado’s largest utility is bringing more electric vehicles to the Centennial State.

On Dec. 23, the Colorado Public Utilities Commission voted to approve Xcel Energy’s Transportation Electrification Plan, which will invest $110 million over three years to build out electric vehicle (EV) charging infrastructure, provide various incentives to switch to EVs, and convert fleets of school buses to electric power.

Since the original plan was proposed in May 2020, CoPIRG Foundation has advocated for its approval and worked to ensure its strategies are the right ones to transition more people from gas-powered cars to cleaner EVs.

“This is a great example of how individual consumer actions, combined with market forces and forward-looking public policies, can lead to a transportation system with lower costs, cleaner air, better health and fewer emissions,” wrote Danny Katz in an op-ed published in The Colorado Sun. “The time is now to accelerate Colorado toward a zero-emissions future.”
Responding to COVID-19

The coronavirus pandemic poses the greatest threat to Americans’ health and safety in a century. But through the course of 2020, the United States lacked a coordinated federal response to the crisis.

As COVID-19 cases started to climb, our national network assembled a team of advocates and policy experts to research and elevate strategies for protecting public health and turning the tide on the pandemic. Working with health care professionals, and with the support of people like you, we advocated for measures to suppress the virus, increase testing, keep health care workers safe, protect consumers and more. Here’s some of the work that you helped make possible in this unprecedented year.

A call to shut down, start over and do it right

JULY 2020: Hundreds of thousands of Americans have died from COVID-19. With a more effective response, we could have saved many of those lives.

But we failed to shut down properly, failed to stamp out the virus, and rushed to reopen the economy before we were prepared to contain future outbreaks with testing and tracing.

Between mid-July and the end of August—as COVID cases rose—nearly 1,400 medical professionals signed an open letter calling on then-President Donald Trump and the nation’s governors to again shut down non-essential activity and to this time stamp out the virus and scale up containment before reopening in measured increments.

The letter, organized by our national network, earned widespread coverage by news outlets including CNN, Forbes and USA Today.
“Mr. Trump, federal administration, honorable governors: We remind you that history has its eyes on you,” wrote Matt Wellington, director of our national network’s public health campaigns, in the letter.

PIRG to federal lawmakers: Ramp up COVID testing, PPE production

NOV. 24, 2020: As COVID-19 cases and deaths reached new highs in November 2020, Americans desperately needed stronger action to suppress the coronavirus and protect the health care workers who protect all of us.

Our national network urged federal lawmakers to provide at least $75 billion to help states ramp up their testing efforts and to boost production of personal protective equipment (PPE) by requiring the Trump administration to fully utilize the Defense Production Act.

Scaled-up testing allows states to catch isolated cases before they become full-scale outbreaks. Meanwhile, increased PPE production helps ensure that frontline workers have the supplies they need to protect themselves and their patients from the virus.

“Americans have sacrificed so much since March, but our leaders haven’t stepped up to meet that sacrifice,” said Matt Wellington. “Our best defenses against COVID-19 are widespread testing and sufficient PPE, yet we still have nowhere near enough of either.”

Panel experts discussed COVID-19 vaccination with U.S. PIRG’s Matt Wellington

NOV. 16, 2020: In November 2020, pharmaceutical companies Moderna and Pfizer announced promising results for their COVID-19 vaccines, prompting questions about what the public should expect and when.

To answer these and other questions, our national network’s public health campaigns director, Matt Wellington, was joined by public health experts Drs. Syra Madad, Saad B. Omer, Krutika Kuppalli and Trudy Larson for the first in an ongoing series of panel discussions.

The experts discussed trial results for the emerging vaccines, obstacles to distributing the vaccines across the country, and what to expect once vaccines are rolled out to the public.

“Our biggest vulnerability is not the vaccine anymore. Increasingly, it’s vaccination,” said Dr. Omer, director of the Yale Institute for Global Health. “We should demand the same level of rigor in vaccine acceptance science as we demand in terms of vaccine development science.”

Video of the full panel discussions can be viewed on our national partner U.S. PIRG’s Facebook page.

PIRG Consumer Watchdog on the alert

For more than 40 years, PIRG’s consumer watchdogs have identified threats in the marketplace and advocated for stronger consumer protections. In 2020, as Americans faced new dangers brought on by the COVID-19 pandemic, our network and our research partners at U.S. PIRG Education Fund responded. And, thanks to your support, we helped push a landmark law to protect Americans from surprise medical billing over the finish line.

Gov. Polis signs anti-price gouging bill into law

JULY 21, 2020: Months into the coronavirus crisis, unscrupulous sellers were still using the pandemic to take advantage of Coloradans by dramatically increasing the prices of essential goods.

In response, state lawmakers and Gov. Jared Polis stepped up to protect consumers and end price gouging in the Centennial State. On July 16, Gov. Polis signed into law House Bill 20-1414, sponsored in the Colorado General Assembly by Reps. Mike Weissman and Brianna Titone and Sens. Mike Foote and Brittany Pettersen. The CoPIRG-backed bill makes it illegal for entities to sell food, fuel, medical supplies or other necessities for an excessive price during a declared emergency.

“By signing these protections into law, Gov. Polis has helped ensure that Coloradans won’t be ripped off on the critical supplies we need to keep ourselves and our communities healthy during this crisis,” said CoPIRG Executive Director Danny Katz. “We thank Reps. Weissman and Titone, as well as Sens. Foote and Petterson, for their leadership on this crucial issue.”
**Landmark health care law protects patients from surprise medical billing**

**DEC. 27, 2021:** Maybe this has happened to you: After a visit to the hospital or emergency room, you get stuck with an unexpected bill for hundreds or even thousands of dollars from an out-of-network provider.

It’s called surprise medical billing, and a bipartisan bill to stop the practice was signed into law on Dec. 27, 2020, as part of a coronavirus relief package. The No Surprises Act will protect patients from “balance-billing,” a practice where out-of-network providers charge the difference between their fees and the maximum allowed by patients’ insurance.

The law also establishes an arbitration process for providers and insurance companies to work out a reasonable payment to further rein in costs. The No Surprises Act allows even stronger state laws to remain in place.

“This undoubtedly is the most far-reaching consumer health protection that Congress has passed in years,” said Patricia Kelmar, our national network’s health care campaigns director.

“But while the final law is not exactly the legislation we called for, we’ll work hard to ensure strong regulations are put in place and consumers know their rights.”

---

**Report finds PPE shortages at 1 in 5 nursing homes this summer**

**OCT. 27, 2020:** Protecting our most vulnerable citizens and preventing further COVID-19 outbreaks means making sure our nursing homes have the masks, gowns and hand sanitizer they need to limit the spread of the coronavirus.

But the nation’s nursing homes experienced massive shortages of personal protective equipment (PPE) over the summer of 2020, a U.S. PIRG Education Fund and Frontier Group analysis of data collected by the Centers for Medicare & Medicaid Services found.

The Oct. 27 report, covered by the New York Times, the Los Angeles Times and CBS News, found that, in August, a fifth of reporting facilities possessed less than a one-week supply of one or more types of PPE—a critical shortage by industry standards.

“It’s appalling that this is how we treat our most vulnerable—our senior citizens and people recovering from a major surgery or illness,” said U.S. PIRG Education Fund Consumer Watchdog Teresa Murray.

U.S. PIRG Education Fund recommended in its report that Congress address PPE shortages by passing the Medical Supply Transparency and Delivery Act.
Right to Repair: not taking ‘broken’ for an answer

Our Right to Repair campaign took on new dimensions in response to the coronavirus pandemic, as medical repair professionals faced repair restrictions in the midst of a public health crisis. In addition, our network’s work to empower consumers and third-party repair professionals with the right to repair was recognized by business magazine Fast Company.

“"I want to thank ventilator manufacturers for providing access to service documents,” said Nathan Proctor, our national network’s Right to Repair campaign director. “We hope this also serves as an example of how restricting repair is harmful. When technicians can’t access service manuals, it creates unnecessary barriers to fixing lifesaving equipment.”

CoPIRG helps win release of vital service information for ventilators

APRIL 22, 2020: In March 2020, as cases of COVID-19 mounted, it became vitally important that hospitals be able to keep ventilators in service as much as possible. But some manufacturers had restricted access to the repair documentation and service keys that biomedical repair technicians need to fix and maintain these lifesaving devices, prompting action from CoPIRG and our national network.

More than 43,000 petition signers and state treasurers and auditors from nine states joined our network’s call for manufacturers to help hospitals confront the pandemic by releasing ventilator service information. And in April, manufacturers including GE, Medtronic and Fisher & Paykel started to make that requested service information available.

Right to Repair named a finalist for Fast Company’s ‘World Changing ideas’

APRIL 28, 2020: Right to Repair is a simple concept: If you own something, you should be allowed to repair your devices for proprietary reasons, leading to unnecessary costs and electronic waste. In April, business magazine Fast Company selected our national network’s Right to Repair campaign as a finalist for its World Changing Ideas awards in the Politics & Policy category.

“We appreciate Fast Company’s recognition of the importance of the right to repair,” said Nathan Proctor. “It seems like such a simple premise, but it’s clear that we need to fight for it.”

In 2020, Right to Repair legislation was introduced or carried over in 20 state legislatures.

2020 PROGRAM REPORT

Member Spotlight

Our work is made possible by the support of you, our members. This year we’re highlighting the story of one of our national network’s members, in her own words.

Clare Feinson

As a child, I was often involved in causes I cared about. I collected money for UNICEF at Halloween and I was always up for service projects through the Girl Scouts. My parents were active in political and volunteer organizations and involved me in mailing newsletters, organizing events, leafleting and getting petitions signed.

My involvement with PIRG started when I was a graduate student at George Washington University, where I served as the chair of D.C. PIRG for a year. I think your organization has done a great job selecting issues where the public interest needs an advocate. Though I have not been involved in the day-to-day workings of PIRG for a long time, I continue to support the work that you do.
