Responding to the COVID-19 crisis

The COVID-19 pandemic has forced Americans to confront harsh realities—from concern for the health and safety of themselves and their families, to the financial struggles brought on by mass layoffs and a dampened economy.

In response to the crisis, CoPIRG and U.S. PIRG Education Fund, the research and policy arm of our national network, have continued to work—from a safe social distance—for a healthier, safer world, calling for measures to improve our country’s ability to discover and care for COVID-19 cases, to protect consumers from price gouging in the marketplace, and to increase production and distribution of vital medical supplies as rapidly as possible.

Ramping up our testing capacity

When the novel coronavirus made landfall in the United States, health experts warned that there were not enough COVID-19 tests available for all who would need them. The inability to adequately test for the virus left health professionals and lawmakers with an incomplete picture as to the scope of the problem.

CoPIRG, U.S. PIRG Education Fund and our national network called on Adm. Brett Giroir, the head of the government’s coronavirus testing response, to implement a national plan for scaling up our testing capacity as quickly as possible.

CoPIRG and U.S. PIRG Education Fund supported plans crafted by public health experts—including former Food and Drug Administration Commissioners David Kessler, M.D. and Scott Gottlieb, M.D.—for federal leadership to build this testing capacity. The plans included expanding labs and speeding up testing time, national coordination on large-scale purchasing...
of testing supplies, and building systems to collect data and identify cases as fast as possible to prevent further spread of the virus.

**Preventing price gouging in a pandemic**

As people rushed to buy hand sanitizer and other critical supplies early on in the outbreak, U.S. PIRG Education Fund released groundbreaking research that revealed massive price gouging on Amazon. The report found that, in February, most surveyed hand sanitizers and face masks saw price surges of more than 50 percent above their 90-day averages. Even 1 in 6 products sold directly by Amazon—not third-party vendors—saw similar spikes.

More than 375,000 people have since joined CoPIRG and our national network in calling on Amazon and other major online marketplaces to implement safeguards that prevent prices from significantly increasing during states of emergency.

Even top officials and lawmakers have joined us in taking action to ensure consumers aren’t taken advantage of during this time of crisis. In letters organized by U.S. PIRG Education Fund, attorneys general from 33 states called on Amazon, Walmart, eBay, Facebook and Craigslist to proactively put a stop to price gouging on their platforms. In April, 346 state legislators from 45 states signed a similar letter sent by U.S. PIRG Education Fund to those same companies.

**Confronting our medical supply shortage**

In response to ventilator supply shortages, CoPIRG and our national network have called on President Trump to fully utilize the Defense Production Act (DPA) and to coordinate distribution of critical medical supplies directly to affected areas. Thousands have signed our network’s petition calling on the president to use the DPA to double the amount of ventilators by mobilizing manufacturers in wartime-scale production efforts. On March 27, the president ordered General Motors to begin producing these lifesaving machines, but more needs to be done to fully meet demand.

Across the country, hospitals have struggled to get the supplies they need to protect frontline workers and care for COVID-19 patients. Our national network recruited 116 mayors and county executives to sign onto a letter urging the Trump administration to centrally coordinate procurement and distribution of essential supplies to everyone who needs them.

The COVID-19 pandemic has upended our way of life. As we confront these challenges, CoPIRG and U.S. PIRG Education Fund are committed to championing the policies that will best protect Americans’ health, safety and well-being in this time of crisis.

**FOOD SAFETY**

**How safe is our food? Produce recalls are down, but meat and poultry are sky-high**

While safety recalls for produce and processed food from the U.S. Food and Drug Administration have declined 34 percent since 2016—when new safety standards were implemented—recalls for meat and poultry have rocketed up 65 percent since 2013, finds the “How Safe is Our Food?” report.

Upticks in recalls don’t necessarily mean our food has gotten less safe. In fact, they could mean our food safety systems have gotten better at identifying dangerous foods. But, says PIRG Consumer Watchdog Grace Brombach, that point is moot: Contaminations should be caught before recalls become necessary.
“Americans should be confident that their food is safe and not contaminated by dangerous bacteria like E. coli and salmonella,” said Grace.

U.S. PIRG Education Fund is advocating for improvements in our food safety systems—including increased testing, monitoring and traceability for pathogens.

BAN ROUNDUP

EPA review insists glyphosate does not cause cancer

Despite a wealth of evidence to the contrary, the Trump administration’s Environmental Protection Agency (EPA) has declared that glyphosate is not a carcinogen.

On Jan. 30, the EPA finalized its review of the main active ingredient in Monsanto’s ubiquitous weedkiller, Roundup. Despite its designation as a probable human carcinogen by the World Health Organization’s cancer research agency, the EPA reaffirmed its stance that glyphosate is not a cancer agent.

The determination is at odds with the verdicts of three U.S. juries, which have awarded hundreds of millions in damages to four plaintiffs since 2018, after determining the weedkiller to be a substantial factor in causing their cancers.

The EPA’s failure to recognize glyphosate as a probable human carcinogen likely rules out a federal ban—an action that countries including Germany and France took in 2019. To protect the health of our communities, CoPIRG and our national network are continuing to lead efforts to ban Roundup in states and cities, unless and until it’s proven safe.

BAN BEE-KILLING PESTICIDES

Bill would limit use of bee-killing pesticides in Colorado

It’s simple: Reducing the use of bee-killing pesticides can only improve the prospects for survival of multiple bee species.

Yet bee populations have been on a steep decline due to many factors, including habitat loss, parasites and use of neonicotinoid pesticides (also known as neonics). Along with Environment Colorado, we’re backing a bill in the Colorado General Assembly to help reverse that trend. The Pollinator Protection Act of 2020 would ban consumer use of neonics, potent neurotoxins that are linked to sharp declines in honeybee and wild bee populations.

Bees are indispensable pollinators for the global food supply. Ninety percent of the world’s food comes from just 100 crops. Of those staple crops, 71 are pollinated by bees. Protecting bees and other pollinators from toxic pesticides is integral for reversing massive die-offs that threaten to disrupt agricultural protection on a global scale.

BE AN ADVOCATE FOR COLORADO’S FUTURE

Support our work in the public interest by including a gift to CoPIRG or CoPIRG Foundation in your will, trust or retirement accounts.

Colorado is poised to score a crucial victory in the effort to end plastic pollution: phasing out plastic foam.

On Feb. 24, a state House committee passed HB20-1162, a bill that takes aim at some of the most pervasive and difficult-to-recycle plastic items that litter our communities, overtax our landfills and pollute our environment.

The legislation would place a ban on polystyrene foam food containers and would make Colorado a national leader on plastic pollution. It is sponsored by state Reps. Lisa Cutter and Jonathan Singer, and state Sens. Tammy Story and Mike Foote.

“Nothing we use once to carry food or a beverage for a few minutes should harm our state for hundreds of years,” said CoPIRG State Director Danny Katz, who testified in favor of the bill.

HB20-1162 now goes to a vote in the legislature, where CoPIRG is calling on lawmakers to pass it.
